

Experiment No: 02

Title: Apply the basic styling to the webpages using CSS.

Aim

To design and enhance a multi-page HTML website by applying Internal CSS styling, improving its visual appearance, layout structure, readability, and user experience.

Objectives

After completing this activity, the learner should be able to:

1. Understand the purpose of CSS in web development.
 2. Apply Internal CSS using the <style> tag inside the <head> section.
 3. Style common HTML elements such as:
 - Headings
 - Paragraphs
 - Navigation links
 - Tables
 - Forms
 - Sections
 4. Create a consistent design theme across multiple pages.
 5. Use CSS properties such as:
 - color
 - background-color
 - margin
 - padding
 - border
 - border-radius
 - box-shadow
 - font-family
 6. Implement hover effects using :hover.
 7. Improve layout structure using spacing and alignment techniques.
 8. Enhance user interface and readability of a website.
 9. Understand the difference between:
 - Inline CSS
 - Internal CSS
 - External CSS
 10. Maintain uniform styling across interconnected HTML pages.
-

Learning Outcomes

At the end of this activity, students will be able to:

- Transform a plain HTML website into a visually appealing website.
 - Apply design consistency across multiple web pages.
 - Understand how styling improves user experience (UX).
 - Prepare the foundation for responsive design and advanced CSS techniques.
-

Theory

Introduction to CSS : What is CSS?

CSS (Cascading Style Sheets) is a style sheet language used to control the presentation and layout of HTML documents.

While HTML defines structure, CSS defines:

- Colors
- Layout
- Fonts
- Spacing
- Alignment

- Responsiveness
- Visual appearance

In simple words: HTML = Structure and CSS = Design

Why CSS is Needed?

Without CSS, web pages:

- Look plain and unstructured
- Are difficult to read
- Lack visual hierarchy
- Provide poor user experience

CSS helps to:

- Improve visual design
 - Maintain consistency across pages
 - Separate content from presentation
 - Reduce repetition
 - Enhance responsiveness
-

» Types of CSS

There are three ways to apply CSS:

1) Inline CSS

Applied inside HTML elements using style attribute.

```
<p style="color:blue;">Hello</p>
```

2) Internal CSS (Used in Your Website)

Written inside <style> tag in the <head> section.

```
<head>
<style>
body { background-color: lightgray; }
</style>
</head>
```

3) External CSS

Written in separate .css file and linked using:

```
<link rel="stylesheet" href="style.css">
```

What Does “Cascading” Mean?

"Cascading" refers to the priority system in CSS.

Priority Order:

1. Inline CSS (Highest)
 2. Internal CSS
 3. External CSS
 4. Browser Default (Lowest)
-

{ Basic CSS Syntax

```
selector {
  property: value;
}
```

Example:

```
h1 {
  color: blue;
}
```

- Selector → h1
- Property → color
- Value → blue

Theory of CSS Features

1) Selectors

Selectors target HTML elements.

Element Selector body

```
{ }
```

```
header { }
```

```
nav { }
```

```
section { }
```

Used to apply styles to all elements of that type.

2) Font Styling

```
font-family
```

```
body {  
    font-family: Arial;  
}
```

Purpose:

- Changes text font
 - Improves readability
 - Creates professional appearance
-

3) Colors

color

Changes text color.

```
color: white;
```

background

Changes background color.

```
background: #0d47a1;
```

Used in:

- Header
 - Footer
 - Navigation bar
-

4) Spacing Properties

Spacing improves layout clarity. margin

Space outside an element.

```
margin: 20px;
```

Used in:

- Sections
 - Page layout spacing
-

padding

Space inside an element.

```
padding: 15px;
```

Used in:

- Header
 - Nav
 - Section
 - Form inputs
-

5) Text Alignment

```
text-align: center;
```

Used to:

- Center header text

- Center navigation
 - Improve symmetry
-

6) Box Model Concept

CSS is based on the Box Model.

Every element consists of: Margin

Border

Padding

Content

In your website, we used:

```
section {  
    padding: 20px;  
    margin: 20px;  
}
```

This improves layout structure.

7) Borders

```
border: 1px solid #ccc;
```

Used in:

- Tables
- Form inputs

Purpose:

- Separate elements visually
 - Improve clarity
-

8) Border Radius

```
border-radius: 8px;
```

Purpose:

- Creates rounded corners
- Makes design modern

Used in:

- Sections
 - Input fields
-

G)Box Shadow

```
box-shadow: 0 0 10px #ccc;
```

Purpose:

- Adds depth
- Creates card-style layout
- Enhances UI design

Used in:

- Sections
-

11) Table Styling

border-collapse

```
border-collapse: collapse;
```

Removes double borders in tables.

th, td Styling

```
th, td {  
    padding: 10px;  
}
```

Improves readability.

11) Hover Effects (Pseudo-class)

```
nav a:hover {  
    color: yellow;  
}
```

Purpose:

- Improves interactivity
 - Provides user feedback
 - Enhances UX
-

12) Form Styling

Input Styling

```
input, textarea {  
    width: 100%;  
    padding: 8px;  
}
```

Purpose:

Makes forms clean

Improves usability

Button Hover

```
input[type="submit"]:hover  
    { background: #1565c0;  
}
```

Adds interactive feel.

13) Width Property

```
width: 100%;
```

Used to:

- Make tables responsive
 - Expand input fields
 - Improve alignment
-

14) Background Colors

Used to create theme consistency:

Element	Color Used
Header	Black
Nav	black
Section	White
Body	White

This creates:

- Visual hierarchy
 - Structured UI
-

■ Advantages of Using CSS in This Activity

1. Separation of content and design
 2. Consistent styling across pages
 3. Improved readability
 4. Better layout structure
 5. Professional appearance
 6. Reduced repetition
 7. Easy maintenance
 8. Better user experience
-

Code Files:

■ index.html(css) (Styled)

```
/* ===== GLOBAL STYLES ===== */
* {
  margin: 0;
  padding: 0;
  box-sizing: border-box;
}

body {
  font-family: Georgia, 'Times New Roman', serif;
  background-color: #f5f5f5;
  color: #111;
  line-height: 1.7;
}

/* ===== NAVBAR ===== */
.navbar {
  background-color: #111;
  padding: 14px 40px;
  display: flex;
  align-items: center;
  gap: 30px;
}

.navbar-brand {

    <!-- About the Game -->
    <section>
        <h2>About the Game</h2>
        <p>Valorant is a free-to-play 5v5 tactical shooter developed by Riot Games. It was officially released on June 2, 2020, after a closed beta period earlier that year.</p>
        <p>The game is set in a near-future version of Earth and revolves around a conflict between two teams. Players choose from a roster of Agents – characters with unique abilities – and compete in round-based matches.</p>
        <p>The main objective is for one team to plant a device called the Spike at a designated site, while the other team tries to stop them or defuse it.</p>

ÇObservation

During the implementation of CSS styling on the multi-page website, the following observations were made:

1. The web pages initially appeared plain and unstructured when only HTML was used.
2. After applying Internal CSS:
 - The layout became organized and visually appealing.
 - Background colors improved content separation.
 - Spacing (margin and padding) enhanced readability.

3. Navigation links became more interactive using the `:hover` pseudo-class.
4. Tables appeared structured after applying borders and padding.
5. Forms became more user-friendly after applying width, padding, and border styling.
6. Rounded corners (`border-radius`) and `box-shadow` created a modern card-like design.

7. Uniform styling across all pages improved consistency.
8. CSS helped maintain separation between content (HTML) and presentation (design).

■ Result

The multi-page HTML website was successfully enhanced using Internal CSS. The following improvements were achieved:

- Consistent color theme across all pages.
- Improved layout and alignment.
- Interactive navigation links.
- Styled tables and forms.
- Professional appearance.
- Better readability and visual hierarchy.

All pages were interconnected and maintained uniform styling.

🔴 Conclusion

The experiment demonstrates that CSS plays a crucial role in web development by improving the presentation and user experience of web pages.

By applying Internal CSS:

- The website transitioned from a plain structure to a professional interface.
- The concept of the CSS Box Model was practically understood.
- Students gained hands-on experience with styling elements such as:
 - Text
 - Background
 - Tables
 - Forms
 - Navigation menus
- The separation of content and design was clearly understood.

Thus, the objective of designing and styling a multi-page website using CSS was successfully achieved.
